

Payout

Client integration manual

Payout+

About us

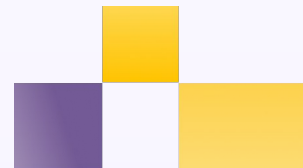

Payout is a licensed payment institution in the EU, established in 2016 to meet the most demanding requirements of e-commerce clients. Payout offers software aimed at processing a large number of transactions, in an automated way, with an emphasis on developing functionality according to the client's current needs. **Payout software is an infinitely expandable solution to support your growth and streamline operations.** Any payment. Any channel. Anytime. In any quantity.

Payout fills an important role in FinTech customer-to-client transaction processing. **With the help of intelligent tools, we keep the level of fraudulent transactions to zero.** In 2020, Payout was the first payment institution in the country to expand its service portfolio with **"PSD2 services"**.

Behind the quality of our product is a team of specialists and IT enthusiasts who keep up with the technological visions of the future.

2-factor authorization settings:

Two-step authentication

Securing your account and signing payments using an authentication factor.

Status ! Disabled

Type: Authenticator

Current password:

Confirm

The type of authenticator will appear on the screen, which you activate by entering your current password.

Enable second-step authentication

Download the free [Google Authenticator](#) app, add a new account, and then scan this barcode to set up your account.

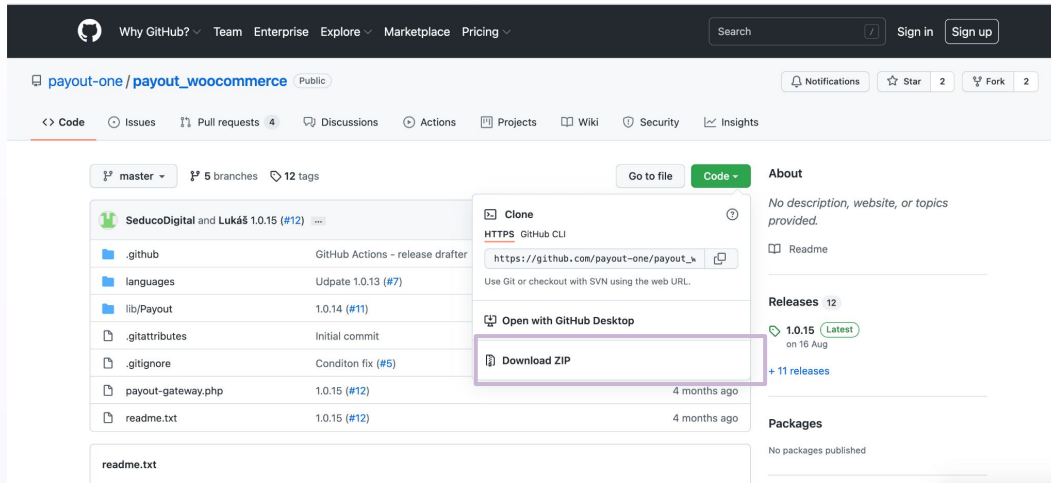

Enter code manually instead

Code:

Confirm code

A QR code will appear, which you scan in your authentication application. Then, enter the "Code" and confirm it.

WooCommerce plugin Payout

The screenshot shows the GitHub repository page for 'payout-one/payout_woocommerce'. The repository is public and has 6 branches and 12 tags. The 'Code' button is highlighted in green. A dropdown menu is open, showing options to 'Clone', 'Open with GitHub Desktop', and 'Download ZIP'. The 'Download ZIP' option is highlighted with a purple box. The repository files list includes .github, languages, lib/Payout, .gitattributes, .gitignore, payout-gateway.php, and readme.txt. The 'About' section is empty, and the 'Releases' section shows a single release, 1.0.15, labeled as 'Latest'.

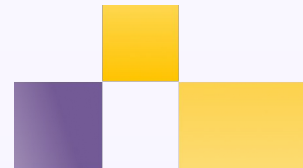

Plugin 

 Download the plugin

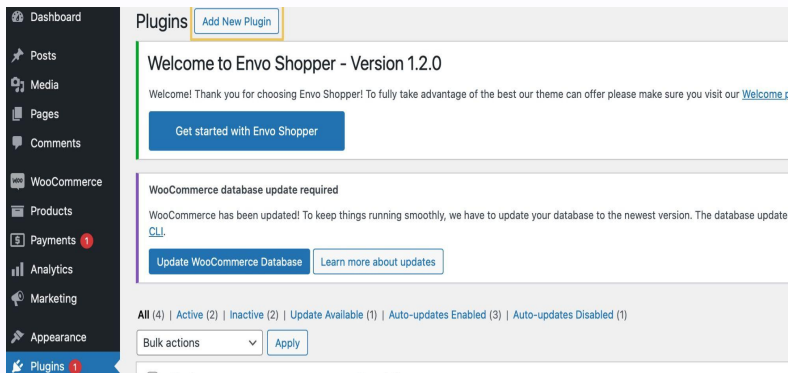

You need to click on the green **"Code"** button.

Download the plugin in zip format from the URL.

Payout

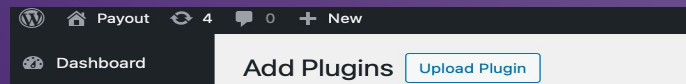

In your wordpress eshop admin interface, go to the Plugins menu and **click on "Add New Plugin"**

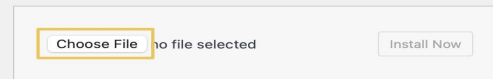

The system will redirect you to the next screen.

Click on "Upload plugin"

If you have a plugin in a .zip format, you may install or update it by uploading it here.

Click on **"Select File"** – select the downloaded zip –
(The system will not take another file format).

Click on **"Install Now"**.

Payout+

installing

the WooCommerce plugin

WooCommerce plugin configuration

Click on the Woocommerce/Settings menu and select the Payments tab. The payment gateway installed in your payment methods list will be displayed (List of payment methods you provide on your store).

Payment Methods

Installed payment methods are listed below and can be sorted to control their display order on the frontend.

Method	Enabled	Description	
 WooPayments	<input type="checkbox"/>	Payments made simple — including WooPay, a new express checkout feature. By using WooPayments you agree to the Terms of Service (including WooPay merchant terms) and Privacy Policy .	 Install
 Direct bank transfer	<input type="checkbox"/>	Take payments in person via BACS. More commonly known as direct bank/wire transfer.	Finish set up
 Check payments	<input type="checkbox"/>	Take payments in person via checks. This offline gateway can also be useful to test purchases.	Finish set up
 Cash on delivery	<input type="checkbox"/>	Have your customers pay with cash (or by other means) upon delivery.	Finish set up
 Payout – Payout - platobné metódy	<input checked="" type="checkbox"/>	Payout gateway integration. Notification URL: <code>https://testshop.payout.tech/wordpress-5.9.3/?wc-api=payout_gateway</code>	Manage

Discover other payment providers [🔗](#)    & more.

- ❖ **Notification URL** - check the notification URL against the domain of your store. **COPY THE URL.**
- ❖ **Enable gateway** - check the box
- ❖ **Gateway Name** - enter "Gateway Payout"
- ❖ **Status** - select "PRODUCTION" from the dropdown menu
- ❖ **Client ID** - the value from the Key field. After logging into the Payout payment account, generate an API key and add its value to the Client ID field. See SLIDE Generating API Keys
- ❖ **Client secret** - the value from the Secret field specified when generating the API key in the Payout payment account. See SLIDE Generating API Keys

Payout+

configuration of WooCommerce plugin

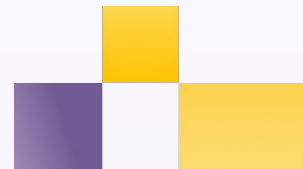

API keys generating

The screenshot displays the 'API Keys' management page in the Payout+ application. On the left, a sidebar menu is visible under the 'Settings' section, with 'API Keys' selected. The main area shows a table with the following headers: KEY ID, PUBLIC KEY, ACTIVE, NAME, and NOTIFY URL. A 'Generate a new key' button is located in the top right corner of the main area, highlighted with a red box.

Generate new key

Click on Settings - API Keys , a screen will appear - click on **"Generate new key"**.

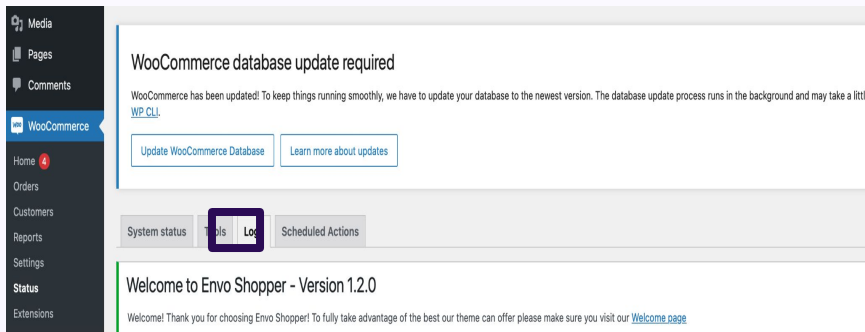

Activation of logs

Log activation in **Plugins/Settings (Payout payment gateway)**.

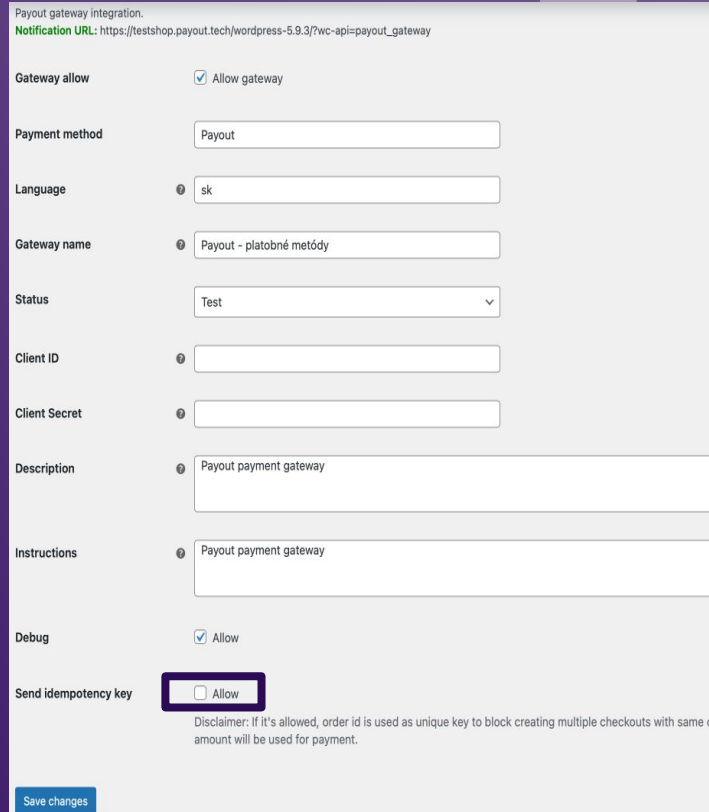

In the settings, tick the checkbox next to **Error logging mode and save**.

Logs can be viewed (copied) in WooCommerce/Status/Logs.

The screenshot shows the WordPress dashboard with a notification for a WooCommerce database update. The notification text reads: "WooCommerce database update required. WooCommerce has been updated! To keep things running smoothly, we have to update your database to the newest version. The database update process runs in the background and may take a little while. [WP CLI](#)". Below the notification are two buttons: "Update WooCommerce Database" and "Learn more about updates". At the bottom of the dashboard, the "Log" tab in the status menu is highlighted with a red box.

Payout+

The screenshot shows the "Payout gateway integration" settings page. The "Notification URL" is "https://testshop.payout.tech/wordpress-5.9.3/?wc-api=payout_gateway". The "Gateway allow" checkbox is checked. The "Payment method" is "Payout". The "Language" is "sk". The "Gateway name" is "Payout - platobné metódy". The "Status" is "Test". The "Client ID" and "Client Secret" fields are empty. The "Description" and "Instructions" fields contain "Payout payment gateway". The "Debug" checkbox is checked. The "Send idempotency key" checkbox is unchecked and highlighted with a red box. A disclaimer at the bottom reads: "Disclaimer: If it's allowed, order id is used as unique key to block creating multiple checkouts with same amount will be used for payment." A "Save changes" button is at the bottom left.

Shoptet integration
